Rhodium Coated Intraoral Photography Mirrors

Improve Your Image

All photographic mirrors are not the same. Mirrors coated with Rhodium, a silvery white precious metal, provide clearer, brighter images that will produce higher quality dental pictures. Superior quality pictures are an excellent tool to help improve clinical effectiveness as they may be used to promote patient education and help explain why major restorative treatment is necessary. They also provide documentation for patient records, insurance claims and case presentations to colleagues. A quality picture really is worth a thousand words!

Highest Reflectivity

- Clear, sharper images with Rhodium coated mirrors
- Up to 10% more reflectivity than chrome mirrors
- Up to 20% more reflectivity than metal mirrors

Highest Quality

- Dual-sided mirror for twice the life of one sided mirrors
- More durability from flatter, higher quality substrate, which allows better adhesion of Rhodium coating to provide outstanding wear resistance
- Able to withstand repeated autoclave cycles up to 350°F/180°C

Patient Comfort

- Thicker mirrors with rounded corners make these more comfortable in the patient's mouth
- Both adult and pediatric sizes - makes it easy to pick the right shape for your patient

Riofoto Rhodium Coated Intraoral Photography Mirrors

Item	Description	Catalog No.
	Riofoto Mirror X-Long Kit of 3 (1 each of 631-101, 631-102 & 631-107)	631-109
